

Case study

Bundaberg homeowner reaping the benefits of a Redback

“Redback offered more useful features in the one package than the competitors that we investigated.”

– Redback customer

Location	Bundaberg, Qld	System capacity
Installer	AC Electrical	4.6kW Redback Smart Hybrid Inverter
Installation date	March 2016	6.24kW Suntech solar panels
		2 x 2.4kWh Pylon Tech batteries

The homeowner required a reliable system that could run their home without huge power bills. They were looking for a long term solution, which could be upgraded if required.

The Redback Smart Hybrid Inverter was installed with the aim of providing daytime power to the pool pump, refrigeration, hot water system and other household appliances and battery backup for night time use. After considering other solar options, they decided to install the Redback Smart Hybrid Inverter because it offered more useful features in the one package than competitors and also its ability to supply high power during grid outages.

The solar solution is now providing great results, with incoming power now zero to minimal. Since the installation their power bills are now in credit.
